“

SharePoint Vitals
brings all the user
activity data you
could ever want to
your fingertips.

”

Find the whozit-whatsit!

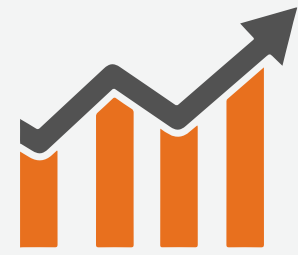

SharePoint Vitals brings all the user activity data you could ever want to your fingertips. Analysis that can take days of manual data manipulation are now available when you need it. Vitals mines your site, page and user activity in real-time and pushes results to a clean and easily navigated interface.

With the available summary reporting, you can quickly identify your top users, sites and content along with problem areas such as slowest loading pages and users who frequently experience slow page load times. You can dig down to the item level which can definitely help in cases of governance and compliance.

Next time management asks the who, what, when, where – you will have the answers!

Key Benefits

User Adoption Stats

Access real time site hits from users right now or look back at All Time

Top 10 Dashboards

Show top 10 sites, users, pages, fastest users, slowest users, search terms and activate documents from one dashboard

Compatible

Works on any version of SharePoint cloud or on premise

Site Usage and Migration Preparation

Show all user analytics in an easy to view site map

Location and Security

Find out where users are accessing the site from around the world

Analytics Role

Decision Making Data

What are the users using SharePoint for, how are they accessing the information, what are they accessing, and where are they doing this from. Armed with deeper insights makes it easier to make better decisions when prompted to do so.

Provide SharePoint ROI

If you are spending any time or money on your SharePoint deployment it is so important to understand the value of that investment. Without knowing how many people are using the system and how much time they are saving doing so is impossible. SharePoint Vitals gives you the insights needed to understand the value of that investment.

Drive End User Adoption

Know what users need to be seeing and drive them to those locations by better understanding the path to the content with SharePoint Vitals Site Map reporting. Once this is understood, and the pages are optimized to create that channel these results can be measured in real-time.

Key Features

Easy to Deploy

SharePoint Vitals is a sandbox code solution so it can deploy quickly to any site collection in minutes, without the need for downtime and starts capturing analytics immediately so you are up and running quickly.

Page Load Time

Understanding the user experience is important, and to do that you need to know how long it takes for the users to load a page. SharePoint Vitals takes this into account and captures all page load times.

Hybrid Environments

SharePoint Vitals can be deployed across multiple SharePoint farms and Office 365 tenants thus providing rich analytics about all your environments especially those hybrid setups spanning domains, locations and SharePoint versions.

Cloud Hosted

This helps remove the burden on your need to get more stuff to ensure you can run SharePoint Vitals. It's easy to setup and manage and once its running you can forget about how the magic happens just know that it does.

Reporting

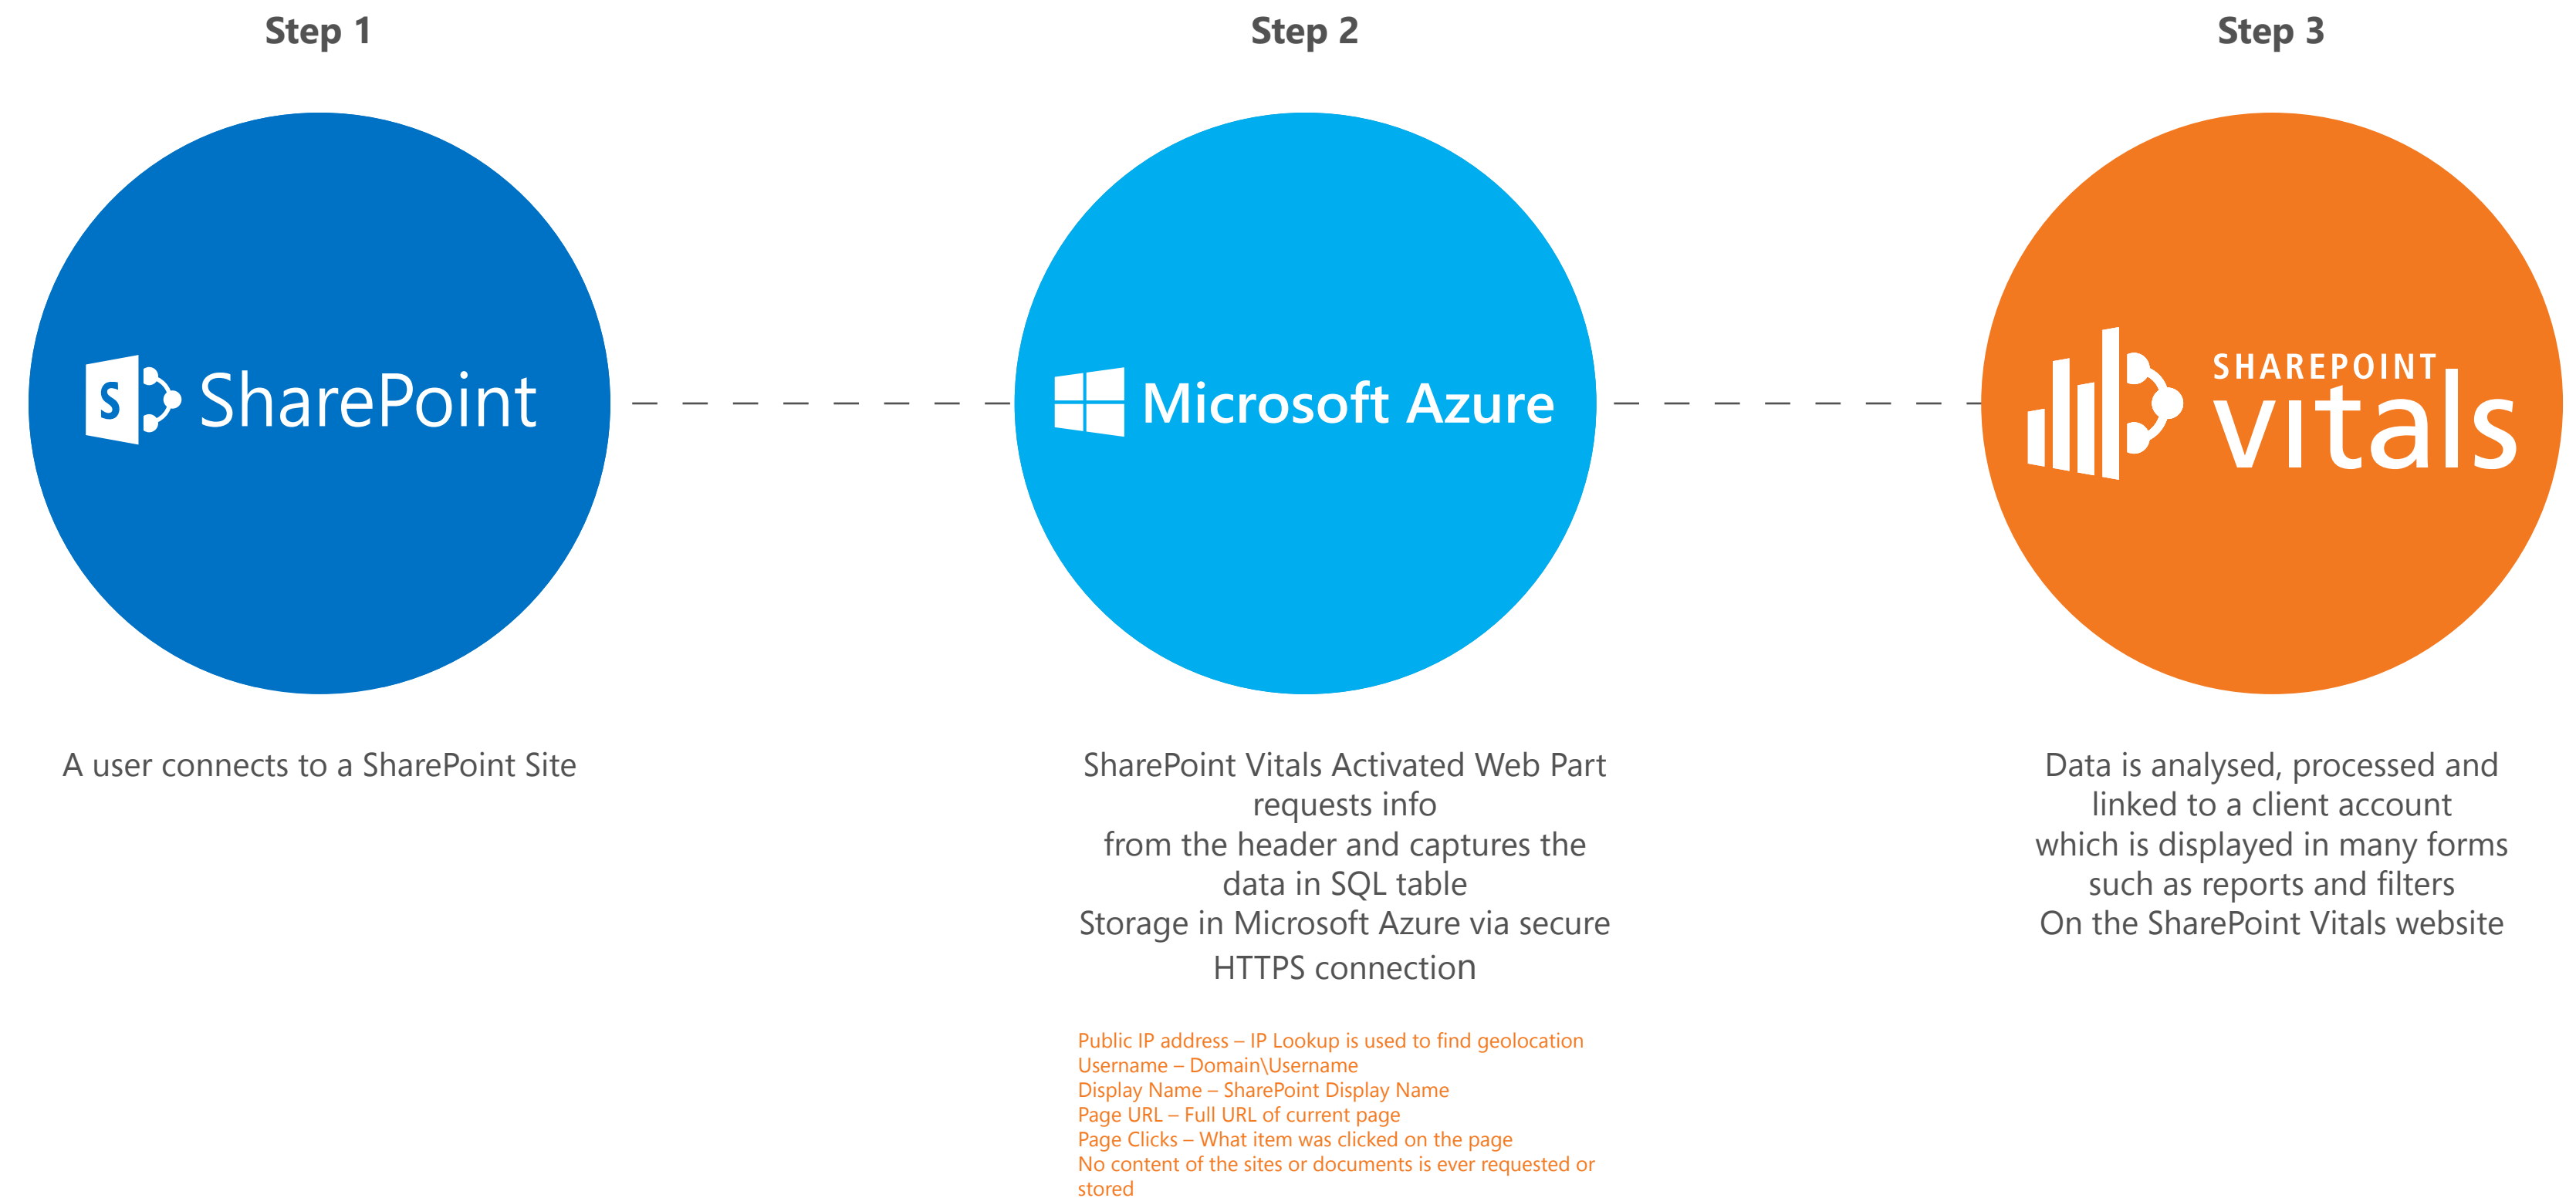

User History, Active Users, Visited Sites, Page Hits, Heat Map, Site Map and Top 10 dashboard reports all available in one click and provide a tailored fit for your requirements.

Details

The whole idea behind SharePoint Vitals is getting to the details, to give you better insight as to how users are connecting with your site. SharePoint Vitals shows you every detail of the users experience from page load time to time on page and what location they accessed the site from. Armed with these details you will be able to better understand the users experievnce and improve your SharePoint site.

How does Vitals work?

Standard vs Enterprise

STANDARD VS ENTERPRISE
